## **DETAILED ACTION**

### ***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance:

The prior art fails to teach a liquid detector for determining presence of a liquid in a solid, among other features, comprising at least one probe, for intimate contact with the solid, having a porous fritted material as light impervious material capable of absorbing the liquid and gradually becoming translucent as the liquid is being absorbed therein; means for detecting the translucency in the material; and means for indicating the presence of the liquid based on the detected result.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

1) Cry et al US 4899047 disclose a translucent probe comprises a porous fritted polyethylene material capable of absorbing the liquid, means for detecting light translucency of the probe, and signal means operating in response to the light translucency detecting means.
